DNA encoding animal haemopoletin receptor which interacts with interleukin-13 - useful to treat asthma, allergy or condition exacerbated by 1gE production

Claim 6; Page 52-54; 93pp; English.

DNA sequences (T66164 and T66165) respectively code for novel mouse and human haemoprotein receptors (W9821 and W09822) designated NR4 that comprise the interleukin-13 (IL-13) receptor alpha-chain. A human bone marrow cDNA library was screened with probes comprising nucleotides 82-840 and 840-1270 of murine NR4 cDNA, and a composite sequence for human NR4 was produced from isolated clones. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             , 3781
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3661
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3781

that comprise the interleukin-13 (IL-13) receptor alpha-chain. To cobtain the mouse sequence; genomic DNA prepd. from embryonal stem cells was screened with oligonucleotides encoding an amino acid sequence (WSDWS) found in many haemoprotein receptors. The genomic clone was used isolate NR4 cDNA clones from WEHI-3B cells, peritoneal macrophage, bone marrow, skin and kidney libraries, and composite sequence for mouse NR4 was produced. The availability of genetic sequences for NR4 permits the development of a range of agents capable of modulating the activity of IL-13 and related cytokines such as interleukin-4 for the treatment of altergy, asthma of ther conditions relating to IgE. The genetic sequences can also be used in prodn. of recombinant NR4 or fusion proteins including NR4.

Nucleic acids encoding novel secreted proteins - useful as, e.g. anti-infianmatory, immuno-stimulatory or suppressing agents Claim 45: Page 80-81; 110pp; English.
The sequence is that of an isolated polynucleotide which may be of use in the production of therapeutic compositions for treating or emeliorating a medical condition in a mammal. Such compositions may be used for, e.g. research purposes as markers for tissues, molecular weight markers for gels, primers or probes, for nutrition as carbon, nitrogen or carbohydrate source. They can also be used as a cytokine for cell proliferation and differentiation activity, used as a cytokine for cell proliferation and differentiation activity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ,1001

PS Claim 1; Page 288; 618pp; English.

CC The present sequence represents a human expressed sequence tag (EST).

CC The present sequence represents a human expressed sequence tag (EST).

CC The polynucleotide, which is a secreted EST, and the encoded protein conditions in human and animals although no supporting medical conditions in humans and animals, although no supporting data is conditions in humans and animals, although no supporting data is conditions in humans and animals, although no supporting data is conditions in humans and animals, although no supporting data is conditions in humans and animals, although no supporting data is conditivity, tissue growth activity, haematopoiesis regulating conditivity, tissue growth activity, activin/inhibin activity, constitution activity, tissue growth activity, haematopoiesis regulating condition to the polynucleotide may also be useful for gene therapy.

CC activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Such compositions may be used for, e.g. research purposes as markers for tissues, molecular weight markers for gels, primers or probes, for nutrition as carbon, nitrogen or carbohydrate source. They can also be used as a cytcokine for cell proliferation and differentiation activity, as immune stimulants or suppressors, e.g. for viral, bacterial or fungal infections, for autoimmune diseases such as multiple sclerosis or systemic lupus erythematosus, to regulate haematopolesis, for tissue growth, as an activator or inhibitor, or as a chemotactic or chemokinetic, haemostatic and thrombocytic, receptor/ligand, anti-inflammatory or tumour inhibitor agents.

                       Claim 1; Page 1252; 2245pp; Japanese.

CA single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences given in T19001-T26837 and which is able to hybridise to part of thuman genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed CDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-cuntranslated sequence is unique to a particular mRNA species, almost call the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

TANGE SON CONTRACTOR 
CC apoptosis protein (IAP), and can be used in the method of the invention. CC apoptosis protein (IAP), and can be used in the method of the invention. CC proliferative disease by treatment with a compound that inhibits CC compounds are used to treat proliferative diseases. Specially cancers of CC compounds are used to treat proliferative diseases, specially cancers of CC liver nasopharnyx, thyroid, central nervous system, prostate, colon, CC to chemotherapeutic agents. High levels of the IAP or NAIP proteins are detected in many cancers and are associated with poor prognosis, CC suggested that wild-type p53 suppresses transcription of the IAP or NAIP coliferative diseases. Transgenic animals are used for testing the effects of antisense color, cresistance to chemotherapeutic agents and mutations in p53 (it is colorance to chemotherapeutic agents and mutations in p53 (it is suggested that wild-type p53 suppresses transcription of the IAP or NAIP coliferative possible coliforned are used for testing the effects of antisense coliforned by the colorance of the IAP or NAIP col

Truncary syndrome PS Claim 19; Pages 51-67; 84pp; English.

CC This is the human SHOX gene sequence containing the PARI region. The gene CC region corresponding to short stature has been identified as a region of genes in this region have been identified as candidates for the short CC stature gene. These genes were designated SHOX (also referred to as CC three). The SHOX gene has two separate SHOX-like homeobox gene on chromosome CC (short.stature homeobox-containing) genes SHOX FT92, SHOXA, SHOXB, SHOX GC (and exons of the SHOX genes as shown in V3561) to V3561 and protein cC sequences of the human growth protein transcription factor SHOXA, SHOXB GC Turner's syndrome. The products can be used to develop agents for the cC treatment of short stature or other human growth disorders. The products can also be used for providing a mitogenic effect on cells, e.g. for the with disturbance in the bone calcium regulation.

Disclosure; Pages 37-45; 84pp; English.

This is a preliminary nucleotide sequence of the SHOX gene. The gene region corresponding to short stature has been identified as a region approximately 500 kb in the PARI region of the X and Y chromosomes. The genes in this region have been identified as candidates for the short
                                                                              Rao E,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1867
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (short stature homeobox-containing) genes SHOX ET92, SHOXA, SHOXD, SHOT and exoha of the SHOX genes as shown in V35610 to V35621 and protein sequance. For the human growth protein transcription factor SHOXA, SHOXD and SHOT is shown W60573 to W60575. The novel genes are responsible for human growth: Defects in the genes can cause short stature, e.g. Turner's syndrome. The products can be used to develop agents for the treatment of short stature or other human growth disorders. The products can also be used for providing a mitogenic effect on cells, e.g. for the treatment of bone diseases such as osterias and diseases involved with disturbance in the bone calcium regulation.

Genes and proteins encoding cytokine synthesis inhibitory factors—useful in treating diseases associated with cytokine imbalances, e.g. parasitic infections and auto-immune disorders Claim 1; Fig 4; 23pp; English.

A human T cell cDNA library was screened with probes based on the murine CSIF gene. Two clones carrying plasmids pH5C and pH15C were identified. (These two expression vectors are claimed). The CSIF polypeptide they encode inhibits synthesis of cytokines associated with delayed type hypersensitivity responses. CSIF (also called II-10) can be used to treat diseases associated with cytokine

C: This is the human SHOX gene sequence containing the PAR1 region. The gene corresponding to show that has been identified as a region of approximately 500 kb in the PAR1 region of the X and Y chromosomes. Three cidents in this region have been identified as candidates for the short contained the part of the X and Y chromosomes. Three cidents in this region have been identified as candidates for the short contained the X and Y chromosome in this region have been identified as candidates for the short contained the X and Y chromosome contained the X and Y chromosome contained the ABC (SHOX-like homeobox gene on chromosome contained the X and SHOX and SHOX and SHOX The Specification provides sequences of SHOX (Short stature homeobox-containing) genes SHOX ET92, SHOXA, SHOXD, SHOYT cand exons of the SHOX genes as shown in V3561 to V3561 and protein containing the product shown which the genes can cause short stature, e.g. containing the products can be used to develop agents for the Turner's syndrome. The products can be used to develop agents. The products can be used to develop agents.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (short stature homeobox-containing) genes SHOX ET92, SHOXA, SHOXD, SHOT and exons of the SHOX genes as shown in V35610 to V35621 and protein sequences of the human growth protein transcription factor SHOXA, SHOXD and SHOT as shown W60573 to W60575. The novel genes are responsible for human growth. Defects in the genes can cause short stature, e.g. Turner's syndrome. The products can be used to develop agents for the treatment of short stature or other human growth disorders. The products can ulso be used for providing a mitogenic effect on cells, e.g. for the treatment of bone diseases such as osteoporosis and diseases involved with disturbance in the bone calcium regulation.

The gene region corresponding to short stature has been identified as a region of approximate; 500 kb in the PARI region of the X and Y chromosomes. Thre genes in the region have been identified as candidates for the short stature gene. These genes were designated SHOX (also referred to as SHOX) or ECX93), ps792 and SHOY (SHOX-like homeobox gene on chromosome three core can be seen to the short can be short can be seen to the short can be seen to the short can be short can be seen to the short can be seen to the short can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                was prepared from 12 pooled bulk tumor samples and primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pTTT3 vector. Library went through one round of normalization. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHPU, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-345479, and 484488-489479."

                                                                                                                                                                                                                                             /note-"Vector: pSPORT1; Site_1: SalI; Site_2: NotI; RNA
was prepared from a pool of 6 anonymous Wilms' tumor RNAs.
RNA was prepared by acid-phenol, followed by one round of
oligo dT selection. CDNA library preparation was with
the BRL/Life Tech. Superscript Plasmid system. An
oligo-dT NotI primer for first strand synthesis generated
gcggccgcc(t)n at the 3' end of the clones. A 5' SalI
adaptor was used with sequence 5'-gtcgaccacgcgtcg-3'.
Resulting cDNAs were size selected (average size 2 kb),
NotI digested, and ligated into NotI/SalI-cut pSPORT1.
Library was constructed by Dr. Manfred Gessler."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δÃ
                        PT New nucleic acid encoding testis-specific cytokine receptor - useful PT for identification of ligands or antagonists, potentially for use as PT male contraceptives or for infertility treatment Claim 2; Page 47-48; 79pp; English.

CC This sequence represents a novel ligand-binding receptor, Zcytor2, which shares homology with cytokine receptors and was isolated from human CC placental polya+ RNA. The resulting polyapeptide is a receptor for CC cytokines (particularly interleukin-13) and is expressed on the surface CC of testicular cells, probably being involved in spermatogenesis. It can be used to detect ligands that promote proliferation and/or CC differentiation of such cells in cultures and may also be used to treat CC ligand-receptor interactions and as male-specific contraceptives. By CC ligand-receptor can also be used to modulate immune function, e.g. in CC aligand and also to isolate and purify ligands. Antibodies can be used to cassay circulating receptor (an abnormal level may be indicative of CC disease such as cancer), for labelling cells that express the receptor, and the receptor, as antagonists.

(HUMA-) HUMAN GENOME SCI INC.
(SNIK ) SMITHKLINE BEECHAM COR
This protein comprises a novel human cytokine/peptide hormone receptors/designated HR-1 receptor. The amino acid sequence was deduced from a cDNA clone (see v04075) isolated from a human testis cDNA library. It shows 27% amino acid identity and 52% similarity with the human interleukin-5 receptor. Also claimed are polynucleotides encoding HR-1 receptor, vector and host cells, an agonist to the polypeptide, antibody against the polypeptide, an antagonist that inhibits the activity of the polypeptide, a process for diagnosing a disease, or a susceptibility to disease, related to expression of HR-1 receptor, and a method for identifying compounds that activate or inhibit the HR-1 receptor. HR-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      08-JUN-1998 (first entry)
